Meeting records  Transcript  Recording

Summary

Partners explored implementing AI communication systems for beekeeping operations and rural education initiatives via automated voice services.

Project Scope and Overview

Participants detailed existing beekeeping and educational initiatives serving rural communities. Discussion focused on current operational models and data collection needs.

Proposed AI Integration

The firms presented an AI communication platform to automate surveys and provide on-demand support for beekeepers. This system would function via text and voice, addressing connectivity constraints.

Implementation and Next Steps

Stakeholders agreed to evaluate costs for a pilot targeting 162 users. Future discussions will incorporate additional donors to assess feasibility beyond current funding cycles.

Decisions

Aligned

- **Pilot project scope restriction** The pilot project scope is limited to the beekeeping initiative, excluding crop production at this stage.
- **Communication channel strategy** The project implementation will utilize both WhatsApp and SMS platforms to accommodate beneficiaries in areas with limited data connectivity.

We've **updated the Decisions section** using your feedback.

Let us know what you think: [Helpful](#) or [Not Helpful](#)

Next steps

- ☐ [DICA Consulting] Send Program Costs: Email the financial details and cost structure of the program to the client.
- ☐ [Galit Cohen] Arrange Followup Meeting: Coordinate a meeting with Hagit and Echel to discuss project implementation.
- ☐ [DICA Consulting] Send Follow-up: Provide all agreed upon project details and materials to the relevant parties. Ensure the information covers the discussed project context.

Details

- **Meeting Introductions and Technical Setup:** The participants introduced themselves, with DICA Consulting and iNua Technologies representing their AI-driven communication firm and Galit Cohen representing Repose for Change, an organization working in rural South Africa. During the initial technical setup, they addressed some minor issues regarding video visibility and confirmed the goal of the meeting was to explore potential collaboration ([00:00:07](#)).

- DICA Consulting and iNua Technologies Service Overview:** The team from DICA Consulting and iNua Technologies explained that they assist organizations in reaching rural and offline populations by creating dedicated, AI-powered call centers ([00:02:11](#)). They explained that their system is trained on specific organizational data and goals, enabling 24/7, human-like conversations to gather data, provide support, and scale organizational reach ([00:03:17](#)).
- Repose for Change Project Overview:** Galit Cohen introduced their organization, Repose for Change, which operates in rural South African communities. They detailed four primary project pillars: a beekeeping project for women's empowerment, Early Childhood Development centers, art projects for schools, and a mental health initiative called Emotion Aid ([00:04:38](#)).
- Beekeeping Project Implementation:** Galit Cohen described the beekeeping project, which currently involves 135 beekeepers in six provinces across South Africa, with plans to expand to 155 beekeepers in the coming weeks. The project provides business training, mentorship, and support for rural women to produce honey and wax products ([00:04:38](#)) ([00:12:06](#)).
- Early Childhood Development and Art Projects:** The organization manages Early Childhood Development centers in remote, rural areas, noting significant infrastructure challenges, such as the use of corrugated iron shacks and unsafe sanitation facilities ([00:07:00](#)). Additionally, they facilitate art programs in 40 classrooms across 20 rural schools, viewing art as a critical component of brain development rather than just a recreational activity ([00:08:04](#)).
- Mental Health Initiative:** Galit Cohen outlined the Emotion Aid project, which was adapted from an Israeli program and is implemented in partnership with the Counseling Hub in South Africa. The initiative provides two main lessons to students in grades nine and 10: one focusing on five body-based tools to reduce stress and anxiety, and another on identifying mental health symptoms and accessing referral networks ([00:09:01](#)).
- Geographic and Demographic Context:** Galit Cohen shared that their base of operations is in East London, recently renamed Kugonani, which is situated on the Indian Ocean and is characterized by its proximity to the Wild Coast ([00:11:16](#)). They noted that while their beekeeping project is national, the schools and centers they support are often in deep, rural areas ([00:07:00](#)) ([00:12:06](#)).
- Organizational Founding and Motivation:** Galit Cohen explained that the organization was founded to support rural communities and address the

issue of rural-to-urban migration, which leads to overcrowding in townships. They emphasized that providing opportunities within rural areas is the core strategy for creating positive change in South Africa ([00:12:54](#)).

- **Beekeeping Operational Structure:** Galit Cohen detailed that the beekeeping project employs seven mentors, each managing between 10 and 20 women. Communication currently relies heavily on WhatsApp groups, with mentors conducting intensive weekly training for the first three months followed by monthly maintenance visits to the hives ([00:14:02](#)) ([00:17:56](#)).
- **Monitoring and Evaluation Practices:** Galit Cohen explained that their Monitoring and Evaluation (M&E) process includes baseline assessments and gathering data on household demographics, income sources, and project impact. They currently collect this data through occasional phone or online conversations with beekeepers, and they expressed a need for more systematic data collection ([00:16:54](#)).
- **Language and Communication Needs:** The participants discussed language barriers, noting that English is the primary language used for communication as it serves as a bridge between the various mother tongues spoken in South Africa, such as IsiXhosa, Zulu, Sotho, and Tswana. Mentors facilitate communication in the local languages when necessary ([00:18:50](#)).
- **Agricultural Project Integration:** Galit Cohen mentioned a potential agricultural project involving crop production to provide food for bees and diversify income for the women, although this initiative is currently awaiting approval from the Joint Distribution Committee (JDC). They noted that if approved, they would need to monitor crop health and access to markets ([00:05:45](#)) ([00:19:34](#)).
- **Proposed AI System Functionality:** DICA Consulting described how their modular AI system could support the beekeeping project by allowing users to upload training materials and contact information. This would enable beneficiaries to text or call the system to ask specific questions, have the system trigger scheduled surveys, and allow the organization to track individual progress and aggregate insights on trends, such as disease detection ([00:21:30](#)).
- **Educational Application of the AI System:** DICA Consulting explained that the same system could be applied to educational contexts, allowing teachers to upload curricula and students to interact with history or other lessons via SMS, even outside of classroom hours ([00:24:02](#)). The goal is to provide a conversational, accessible interface rather than a rigid survey-style interaction ([00:25:19](#)).

- Follow-up and Financial Proposal:** Galit Cohen requested that DICA Consulting send an email with the program costs and operational details to facilitate a meeting with other stakeholders, including Hagit and Echel, the agronomist from JDC ([00:26:25](#)). The teams confirmed that the initial use case would focus on the 162 total people (155 beekeepers and 7 mentors) involved in the beekeeping project, utilizing WhatsApp and SMS channels ([00:28:27](#)).
- Connectivity and Digital Tools:** Galit Cohen reported that while they currently use Kobo Collect for offline data collection and aggregation into Excel, they are interested in new tools. They noted that connectivity and data costs are significant challenges in their operational areas, necessitating an offline-capable or data-light solution ([00:29:20](#)) ([00:31:06](#)).
- Mentorship and Sales Logistics:** Galit Cohen clarified that mentors are paid a stipend as independent contractors rather than full-time employees. Beekeepers have the choice to sell their products individually within their communities or sell them to the mentor, who manages their own independent brand and marketing ([00:32:17](#)).
- Logistics of Hive Maintenance:** Galit Cohen described the physical challenges of hive maintenance, such as wearing thick protective gloves that make it difficult for mentors to hold pens or use smartphone screens while inspecting apiaries ([00:34:30](#)). They noted that record-keeping often happens after the suit is removed or when mentors step away from the hives ([00:35:21](#)).
- Biological Challenges and Environmental Factors:** The participants discussed various challenges in beekeeping, including predators, diseases, wax moths, and "absconding," where bees leave the hive due to insufficient food or environmental factors ([00:36:08](#)). Galit Cohen explained the importance of maintaining a balance between the brood box, which is left for the bees, and the "super" layers, which are used for honey harvesting ([00:37:56](#)).
- Future Business Development:** Galit Cohen explained that their vision is to transition the mentors from running a "project" to managing sustainable, high-production businesses ([00:45:07](#)). They mentioned that they provide business skill training, including marketing, to help these mentors professionalize their activities ([00:39:49](#)).
- Scaling and Funding Uncertainties:** The participants discussed the constraints on scaling the project, noting that growth is limited by access to land, water, and forage for the bees ([00:41:44](#)). Galit Cohen shared that funding for the project is handled on a year-on-year basis by the JDC, creating a degree of uncertainty regarding the project's long-term future beyond 2026 ([00:45:07](#)) ([00:47:11](#)).

iNua Technologies & Ripples For Change - Transcript

00:00:07

iNua Technologies: Hi.

DICA Consulting: I Spanish.

iNua Technologies: Hi.

DICA Consulting: Hi

iNua Technologies: Okay. the seda. Wow.

DICA Consulting: babysitter. Okay. Okay.

iNua Technologies: Hello.

Galit Cohen: Hi.

DICA Consulting: Hi

Galit Cohen: Hi.

iNua Technologies: Hey.

DICA Consulting: Manisha.

Galit Cohen: My friend

iNua Technologies: Little bit.

DICA Consulting: Midst

Galit Cohen: used to speak Hebrew and that's it.

DICA Consulting: of

iNua Technologies: Who is with you in the room? We cannot see it. This is why we're

Galit Cohen: Yeah, she's joining. She's trying to roll. Hi, my name is Robin.

iNua Technologies: Hi.

DICA Consulting: Hi.

Galit Cohen: Yeah, just a second. Too many bags in the

DICA Consulting: Sure. No problem.

Galit Cohen: office.

DICA Consulting: Yeah, I know how it's like

Galit Cohen: What's happening here? Camera is not really capturing this.

iNua Technologies: Yeah, we are now seeing mostly plants.

Galit Cohen: Yeah, that's plastic plants.

DICA Consulting: Yeah.

Galit Cohen: That doesn't doesn't count really.

iNua Technologies: Better.

Galit Cohen: Um, so how do you want? Um, okay.

00:02:11

Galit Cohen: Should we just do introductions?

iNua Technologies: Yes, please.

DICA Consulting: Yes, please.

Galit Cohen: Okay, you go. You stop.

DICA Consulting: Okay.

Galit Cohen: Going to drink my tea.

DICA Consulting: So, I'm Adik. This is Mal. And we are from I know Technologies. Um, just in a short summary about what we do. We're creating um Sorry, just a second. I have this something jumping on my window. Sorry.

Galit Cohen: sounds violent.

DICA Consulting: Yeah.

iNua Technologies: Is that working?

DICA Consulting: No. And some just strange.

Galit Cohen: Nothing is jumping on my

DICA Consulting: Yeah. Yeah.

Galit Cohen: window.

DICA Consulting: I'm a bit surprised by it as well. It's a sometimes, you know, when uh when computers doing things that I'm not expecting it, usually my go-to is Mikall. So, yeah. Okay. Uh so, we're from Yes.

Galit Cohen: a danger.

DICA Consulting: We're from Ina Technology and we're helping organizations to create a humanlike

Galit Cohen: Okay.

DICA Consulting: conversations at scale uh to help them talk with their beneficiaries.

00:03:17

DICA Consulting: Um we're uh specifically um reaching rural and offline populations. Um but uh we need to understand like we're not um I'm doing a disclaimer at the beginning like that we're not really working in South Africa at the moment. So we need to do some research in that aspect. Uh but this is how we're working in Kenya and Zambia and Rwanda and Tanzania. Uh we're creating basically a dedicated call center that is powered by AI and we train your our system on your organizational data and the context and your goals and your challenges. And this allows you to create and contain like 247 connections with your beneficiaries. Uh, and it's like the AI can I'm sorry can pick up the phone, ask questions, gather data, provide support to the beneficiaries that you that you want and everything is in is in a human natural conversation. Um, this helps you to scale your reach basically and get you to help more people or reach more people. I am still trying to understand what you're specifically doing. I remember you telling me briefly in Sun Club.

00:04:38

DICA Consulting: Um but I'd love to get

Galit Cohen: Okay.

DICA Consulting: more

Galit Cohen: So, Robin, look have another face. Look at that. Hello. Um, and I'm delet um and we are in working in repose for change. organization working in rural communities in South Africa. We have a few projects. Um,

DICA Consulting: Mhm.

Galit Cohen: one of the projects for example with JDC um,

iNua Technologies: Mhm.

Galit Cohen: as we call it a joint very very interesting name when you work in English-sp speakaking countries and it's it's it gives like a completely different

DICA Consulting: I know.

Galit Cohen: understanding. Um, but anyway um, JDC and um, it's a beekeeping project. So for example, we need to communicate with our beekeepers. We need to communicate with our mentors. At the moment, we have 135 beekeepers. So this is basically a woman empowerment project when we teach beekeeping women from rural communities how to beekeep as a business.

DICA Consulting: Okay.

Galit Cohen: And they sell honey and they sell wax products and they sell a whole lot,

00:05:45

DICA Consulting: Okay.

Galit Cohen: you know, they produce a lot of things. Um it's it's not yet on mass production.

iNua Technologies: Wow.

DICA Consulting: Amazing.

Galit Cohen: Um but we begin to kind of like really harvest more and more honey so it's growing.

iNua Technologies: Mhm.

Galit Cohen: Um yeah and I think that actually the JDC if it's something that is uh can help the the um help our beekeepers I think this is something that this connection between Israel Israeli technology um the JDC will actually like um one of the growing part of of this project is

iNua Technologies: Mhm.

DICA Consulting: Mhm.

Galit Cohen: also um agriculture so we're bringing now crop production uh So it will be it it's for the bees. So it gives more food for the bees and it's also for the women to diversify their income.

DICA Consulting: That's amazing.

Galit Cohen: Another project another project that we have is early childhood development. Uh so um in Hebrew ganadim uh and um and what we do is we have a local mentor for between 15 to 26 galadi. We call them crash.

00:07:00

Galit Cohen: It's in French.

iNua Technologies: Mhm.

Galit Cohen: I don't know why we have a French word in in this country. Um and uh so we have some something between 15 to 26 crash crashes and it's like it's in the deep rural areas. So it's long gravel road drives um to reach this place is very in some areas it's very very basic. It's in a in a shack of corrugated iron. Very poor safety. um in in those areas for the kids. Uh some places are beautiful like not the way that we in urban areas

DICA Consulting: It's

Galit Cohen: can imagine but for rural areas they are beautiful and safe and beautiful education and um high standards

DICA Consulting: cool.

Galit Cohen: and some places not as great. Uh we just had a case not in our our area but we have this issue in in our areas too where they don't have toilets, they don't have flushing toilets. So they have like pit toilets um and um every few months you have a child who falls in and and died.

00:08:04

iNua Technologies: sol. Yes.

Galit Cohen: So we just had a case on Thursday last Thursday.

DICA Consulting: Oh, damn.

Galit Cohen: Um a year old a year and a half a year and a half just fell in.

iNua Technologies: Wow.

Galit Cohen: Yeah. Um so that is our ECD centers. Um that is another project. Uh we also have art project in in primary schools. So there we have 20 schools 20 um 40 classrooms uh where we have every week we send videos of things that the teachers can do because they don't have our teachers in those schools. These are small schools, rural schools. There's no there's hardly enough money for kids.

iNua Technologies: Yes. Art in every time I hear about art in

Galit Cohen: So

DICA Consulting: Yeah.

iNua Technologies: like education in Africa. Wow.

Galit Cohen: yeah. So we see we see art as brain development and not just like yay fun.

iNua Technologies: This

Galit Cohen: Um so so we encourage it and we we hope that the department the the government will actually take

00:09:01

iNua Technologies: is

DICA Consulting: Definitely.

Galit Cohen: over because we made this um project cheap on purpose.

DICA Consulting: Hold

Galit Cohen: um you know so it's uh it doesn't it's not um expensive to implement uh on a bigger

iNua Technologies: okay.

Galit Cohen: scale um and we have mental health um don't know if you remember that

DICA Consulting: on.

Galit Cohen: when they spoke about new members of Olam they spoke about emotion aid Emotion Aid is actually it started in Israel uh but it's adjusted to South Africa by

iNua Technologies: Please.

Galit Cohen: um by an organization here called the counseling hub. Um and um and it's basically five tools to reduce stress and anxiety

DICA Consulting: Mhm.

Galit Cohen: from the body.

iNua Technologies: Mhm.

Galit Cohen: Um stress and anxiety sit in the body first. Um so how to reduce it? Uh so we give five tools to grade nine and 10 before they start metriculating you know before they start graduating and all the exams and the stress. Um we find crazy stories from them from the kids and

DICA Consulting: I'll show

00:10:12

Galit Cohen: we also help the teachers as well.

DICA Consulting: you.

Galit Cohen: So we have two lessons one is about emotion aid with the five tools and one is about signs and symptoms of mental health. So they talk about panic attacks and they talk about um different different mental health uh and what to do and we leave them with emergency numbers and we leave the schools with a booklet of referral numbers. So all these things are in the rural areas. All these things are far away from us. Um and they going to get further because we are planning to

iNua Technologies: Mhm.

Galit Cohen: expand.

iNua Technologies: This is

Galit Cohen: Um so it's uh the idea that we might have a constant communication with our beneficiaries that is easy easy to use um something that sounds attractive. Uh it's um

iNua Technologies: Which areas of South Africa do you are

DICA Consulting: Mhm.

iNua Technologies: you?

Galit Cohen: we live in a smallish town um called East London but they just

iNua Technologies: Mhm.

Galit Cohen: changed the name to Kugo City.

00:11:16

Galit Cohen: um we all try to adjust to the new name. Nobody likes the name besides the person who voted for it,

iNua Technologies: Okay.

Galit Cohen: which is probably one person. Um and um so yeah, but but basically it's a relatively for South Africa, it's a very small small town, but it's like 600,000 people. Um we are on the Indian Ocean.

iNua Technologies: Okay.

DICA Consulting: Mhm.

Galit Cohen: So beautiful beautiful area.

iNua Technologies: Yeah. Do you have whales?

Galit Cohen: Um we we have sometimes we have dolphins. A lot of dolphins. Yeah. Yes.

DICA Consulting: No.

iNua Technologies: Okay.

Galit Cohen: Um and we have something called the wild coast which has like it's 600 kilometers of wild beaches.

iNua Technologies: Okay.

Galit Cohen: Um so like untouched white white untouched

iNua Technologies: I see.

Galit Cohen: beautiful.

iNua Technologies: I've been in one of those.

Galit Cohen: It's good to work with us just to come to our

iNua Technologies: Yeah,

Galit Cohen: area.

iNua Technologies: I've been in Alexandria, which it sounds very similar to your area.

00:12:06

DICA Consulting: Definitely.

Galit Cohen: The beekeeping project is national. Yeah. Yeah. The beekeeping is uh is in six provinces. So it's all over.

iNua Technologies: Okay.

Galit Cohen: Yeah. Well, from where?

iNua Technologies: Okay.

Galit Cohen: From Cape Town area,

DICA Consulting: Yeah.

Galit Cohen: Garden Routt, which is also beautiful. Um

iNua Technologies: I've been in Alexandria,

Galit Cohen: Yeah.

iNua Technologies: which sounds really similar to the surroundings you're telling

DICA Consulting: Amen.

iNua Technologies: about. Um,

Galit Cohen: No,

iNua Technologies: can I ask about your No.

Galit Cohen: it's really not. It's really not.

iNua Technologies: Okay.

Galit Cohen: You mean Alexandria in uh in Johannesburg or you mean Alexandria

iNua Technologies: in you know it's a in no in South Africa I'm talking

Galit Cohen: in Egypt?

iNua Technologies: about South Africa on the beach there is a big

Galit Cohen: Why were you here?

iNua Technologies: what I'm traveling yeah I've

Galit Cohen: Why were

DICA Consulting: She She just loves She loves Africa. She's been

Galit Cohen: you

iNua Technologies: been in South Africa I've been traveling in South Africa can I ask about

00:12:54

DICA Consulting: everywhere.

Galit Cohen: Okay.

iNua Technologies: your role in the like how do what is your personal connection to the organization and how What is your role in organ?

Galit Cohen: I'm the founding director.

iNua Technologies: Yeah.

Galit Cohen: I started I started this

iNua Technologies: And yes.

Galit Cohen: mess.

iNua Technologies: So I wanted to ask about your personal connection. How did it come up in your from your what was

Galit Cohen: So I worked in an organiz in I worked in an organization called Africa

iNua Technologies: your motivation to Yeah.

Galit Cohen: Tikun from Tikunam Jewish but supporting townships in in South Africa and um and um and I just realized that the real answer is to support rural communities to stop the migration to the townships because the townships are overcrowded. they basically urban poor. So that's basically it.

iNua Technologies: Mhm.

Galit Cohen: Um and uh and by offering more opportunities for people living in rural communities, we can actually change a lot of things in South Africa.

iNua Technologies: Okay. Um and you

Galit Cohen: Robin is and Robin is the project manager of u the

00:14:02

DICA Consulting: Um,

iNua Technologies: Y and can you tell us more about the operational of the level of the B the B project like how

Galit Cohen: organization.

iNua Technologies: does the dayto-day operation looks like? How does the communication today with the woman is being handled? How many I don't know do you have field agents on the ground? How how do Yeah. the whole operational structure of the

Galit Cohen: Do you want to Okay.

iNua Technologies: project.

Galit Cohen: So basically um we have seven mentors based in all the different provinces and each of them have um 10 to 20 women that they manage underneath them.

iNua Technologies: Okay.

Galit Cohen: So they we use WhatsApp a lot. I don't know if you know about WhatsApp and so all of them have these groups where all the women are on the groups and they generally communicate through WhatsApp.

iNua Technologies: Okay.

Galit Cohen: Um and we communicate also with all of our mentors.

iNua Technologies: Is this

Galit Cohen: We have our own group through WhatsApp.

iNua Technologies: okay?

Galit Cohen: So the the messages travel down like that.

00:15:02

iNua Technologies: Is

Galit Cohen: Um when they start out they have about every week or second week they go undergo training

iNua Technologies: this

Galit Cohen: through the mentor and they um see each other quite often and then after they know more or less what they're doing they'll come once a month or or so um to do maintenance on the beehives.

DICA Consulting: So, so sorry for interrupting.

Galit Cohen: Um

DICA Consulting: I'm just trying to say that I understood. So, at the beginning when a woman gets like on boarding to the program, she's assigned to a mentor. Each mentor has about you said 20 women that he's that

Galit Cohen: It

DICA Consulting: okay.

Galit Cohen: is

DICA Consulting: And then he's like at the beginning is like getting to know her, visiting quite often. How much is quite often once a week for the for

Galit Cohen: once a week for training first three

DICA Consulting: the initial training and then

iNua Technologies: That's

DICA Consulting: after and yeah so the training is about

Galit Cohen: months and then afterwards it's once a month.

DICA Consulting: three weeks and afterwards it's becoming once a month and the one what's happening in the once a month like

00:15:55

iNua Technologies: it.

DICA Consulting: it's an additional training it's monitoring like what's happening

Galit Cohen: monitoring. So, um, every beehive has to be opened once a month to check that there's no diseases, that there is everything that's supposed to be there, that it's doing well, and they're supposed to have a log sheet to say this is what it looks like, the brood is like this, or, you know, I'm not going to go into too much detail to explain the hive, but they have to have high

iNua Technologies: Yeah.

DICA Consulting: Okay.

iNua Technologies: Okay. And that's

Galit Cohen: maintenance.

DICA Consulting: And that's this is something that the that the field officer is doing like he's doing

iNua Technologies: happen.

DICA Consulting: the this check manually over

Galit Cohen: No, the ladies come to wherever the hives are and they must do it.

DICA Consulting: there.

Galit Cohen: It's their job, not the mentor. And what and the communication that we have with the ladies with the beekeepers is so far we

DICA Consulting: So

Galit Cohen: had just maybe twice we we spoke directly to them.

00:16:54

Galit Cohen: We don't often talk to them,

DICA Consulting: All

Galit Cohen: but now part of our M and um we're trying to get more um details from

iNua Technologies: Is it?

Galit Cohen: them.

iNua Technologies: Is

Galit Cohen: Uh so we already spoke to them twice.

iNua Technologies: it?

Galit Cohen: we have somebody who's doing online or phone conversations with them trying to get all the information from them.

iNua Technologies: Which kind of information is it important for you to get direct from the

Galit Cohen: Um

DICA Consulting: right.

iNua Technologies: women?

Galit Cohen: it's M and stuff. So we will ask um so firstly when we did our very first survey we also asked um baseline assessment stuff in terms of where do they come from? what is their household like to get a little bit of the um demographics of you

iNua Technologies: Okay.

Galit Cohen: know where they come from and their income and then to see okay so how often do you harvest how much money do you

iNua Technologies: What is this?

Galit Cohen: make um are you on a government grant where does your money actually come from and then where do you spend the money do you spend it on food for your household or education for your children so in terms of getting a big impact um we like to see line of sight on all angles of the project

00:17:56

iNua Technologies: Mhm.

Galit Cohen: how long they've with us. Um why do they stay? Um what are their needs? Where do they I mean the last seminar we had, we actually um built a little pack that each mentor can take a beekeeper through a

iNua Technologies: Amazing.

Galit Cohen: journey in in terms of their progress and success. What where do they want to end up in life and how can we help them get there?

DICA Consulting: Oh, that's

Galit Cohen: Um things like that. So yeah,

DICA Consulting: amazing.

Galit Cohen: quite varied.

iNua Technologies: And how does the operation? So how many women are approximately?

Galit Cohen: 135 and and it's going to grow.

iNua Technologies: Okay.

Galit Cohen: It's going to grow soon by 20.

iNua Technologies: And

Galit Cohen: Yeah. So, we'll have about 155 in the next few

iNua Technologies: wow,

Galit Cohen: weeks.

DICA Consulting: So,

iNua Technologies: amazing.

DICA Consulting: so this means that you're also on boarding new field officers.

Galit Cohen: Yes.

DICA Consulting: Okay.

Galit Cohen: Yeah,

iNua Technologies: And are which languages are most women do most women

00:18:50

DICA Consulting: Um

Galit Cohen: we communicate in English because they have a different mother tongue.

iNua Technologies: speak?

Galit Cohen: So if you're in the eastern K province, they speak Isosa. If you go to Natal, they speak Zulu. If you go to the northern provinces,

iNua Technologies: Okay.

Galit Cohen: there's Sutu and Swana. So there's very different local languages.

iNua Technologies: Yeah.

Galit Cohen: So it's easier to communicate in English.

iNua Technologies: Communicate in

Galit Cohen: And and in many in many schools even if they will be taught in in their in their mother tongue

iNua Technologies: English.

Galit Cohen: um it's their second language is English. So at least they will know how to read English even if they will not feel confident to communicate in English but they

DICA Consulting: Just

iNua Technologies: Okay.

Galit Cohen: will be able

iNua Technologies: The read and write.

Galit Cohen: to I'm

iNua Technologies: How about writing?

DICA Consulting: just

iNua Technologies: Are you they able to write in

Galit Cohen: sure and they can understand basics and um whatever they struggle with the mentor helps them because the

00:19:34

iNua Technologies: English?

Galit Cohen: mentor generally can speak in their mother tongue.

iNua Technologies: Okay. And can you tell us more about the operation of the crops and the agricultural project or is this just the

Galit Cohen: So this is just this haven't it they haven't JDC hadn't um approved it

iNua Technologies: beginning?

Galit Cohen: yet. We are still um waiting for that.

iNua Technologies: Okay.

Galit Cohen: Um but if it will be approved um we'll there will be um we'll have to go to each one of the sites.

iNua Technologies: It's

Galit Cohen: We have many sites. we'll have to go to each one of the sites and to see what which crop works best and what will make more money and what will be best for the bees and so there is a lot of factors that we don't know.

DICA Consulting: I

Galit Cohen: Uh but we do work with um people who do know um so so yeah so then

DICA Consulting: Oh,

Galit Cohen: we'll just have to communicate with them about harvesting and access to market and uh what they planted and water consumption and all of this.

00:20:37

Galit Cohen: will have to know everything from them to know that everything is going well.

iNua Technologies: Yeah.

DICA Consulting: come

Galit Cohen: If they will tell me, for example,

iNua Technologies: Okay.

Galit Cohen: we um we see snails on our cabbages,

DICA Consulting: on.

Galit Cohen: then we'll be like we'll have to know what to

iNua Technologies: Yeah. Yes. Great.

Galit Cohen: do.

iNua Technologies: And do you have any missing um would you like to add any communication capabilities to your educational programs?

Galit Cohen: I don't know.

iNua Technologies: Oh,

Galit Cohen: I I think I need to understand how you how does it really work.

iNua Technologies: this is less. Okay.

Galit Cohen: So we'll know how we can actually marry. Yeah.

iNua Technologies: Yes.

Galit Cohen: Right now it's a it's it's just I understand AI. I understand like but how what how do you work in Zambia?

DICA Consulting: Okay.

Galit Cohen: Give us examples of projects you work in that might be relevant to

iNua Technologies: Yeah.

DICA Consulting: Okay.

Galit Cohen: us.

DICA Consulting: So, what we offer basically is a system that is totally modular.

00:21:30

DICA Consulting: So you can enter any context inside of it and it will be like an expert in that context. So we have we have NOS's that we work with or we have schools or we have agri businesses each one what's basically what you're doing is you're let's take the example of the of the beekeepers okay and afterwards I will give the same example on the education. So for the beekeepers, you're uploading the content of the training and you're uploading the the contact information of the woman and you can create a supportive system of that training. Meaning, let's say they need an answer or they they have a specific question to their case, they can just text or call the the number and they ask the specific question. And you don't need a person to answer the system searches the training materials and answer the question at the same time. You can also trigger surveys. So like if you want to collect like you said the livelihood information or the demographic or even more specifically per farmer or or per beekeeper uh what like the implementation of the training.

00:22:47

DICA Consulting: So you can have surveys in different times that you can schedule up front and then you get like regular surveys for the the people and you can see the aggregated data and the insights afterwards. As more and more conversations are happening in the platform, you'll get more insights on the trends of everything that is happening, you can go see from disease detections in area. Let's say several women at the same area all of a sudden report the same types of symptoms and you know that there is something more systematically going in that area. just for for example you can also develop this and add beyond the training materials you can add moreformational also like a lot of businesses in Africa at least NGOs's are like they have multiple streams so they have the training and they have microloanings and they have payments and they have all diff different kind of operations and then you can just gather everything at the same system and have the people communicate

with it and be aware of the different things and the agent can know to answer the specific questions and monitor each farmer.

00:24:02

DICA Consulting: Uh if we're taking this system and I'm trying to implement it on the schooling then in this case also you get you can upload training session like school callum into the system and then the students are able to learn through interaction through the SMSs or phone calls. So, let's say we have a teacher that uploads a history lesson and he can trigger questions for the student that after hours he can answer through his through his parents' phone and then he can learn also outside of school and not just limited to the timing when he is in the classroom. So, as I said like the system is mod is very modular like you can use it in different contextes. The whole point is it to give you direct access to the people helping you collect data helping you communicate what you want to communicate. This can also be applied to the whole organization as a whole meaning that you have everything all the projects that you work with at the same platform and depending on the person who is reaching out he will be navigated to specifically the project that he's in and the information within it.

00:25:19

DICA Consulting: Still it it it

Galit Cohen: Okay.

iNua Technologies: and a we are purpose is to do it all as a very accessible human-like

DICA Consulting: varies.

Galit Cohen: Okay.

iNua Technologies: conversation. Not just a survey asking question one by one, but really create a conversation that is friendly. uh in order to really collect value uh valuable data not just rate from one to five like really collect data that is uh we can get a real insight of the person's view and allows the woman also

DICA Consulting: Mhm.

iNua Technologies: to have accountability when she's now in the or farmers in the field have an issue when they are in the field and they don't remember the last training session they have a way uh to find this information and to get the help they need at the moment and not only waiting until

DICA Consulting: Thank you.

iNua Technologies: the next training

DICA Consulting: Yes,

Galit Cohen: Okay.

DICA Consulting: it also gives you access to um to like soft information.

iNua Technologies: session.

DICA Consulting: So like not like Mik said, it's not just press one if it's yes, press two if it's not.

00:26:25

DICA Consulting: Like you get you get nuances and contextes from the language. So I'm I'm not sure if we have those languages in our in our portfolio.

Galit Cohen: No English.

iNua Technologies: No,

DICA Consulting: Mal Okay.

Galit Cohen: Yeah.

iNua Technologies: she if she said they're based on English, then it's it's really

Galit Cohen: Yeah.

DICA Consulting: Yes. But we also offer in in Zambia and Kenya and Ken,

iNua Technologies: good.

DICA Consulting: we also offer local languages. So it it even gets a bit more nuances. Um so just for you to

Galit Cohen: Okay.

iNua Technologies: Yeah.

Galit Cohen: So,

DICA Consulting: know

Galit Cohen: get that like just to um to understand also the the financial implications. Um will you be able to send me an email with um costs of the program? How does it work financially?

iNua Technologies: Is

Galit Cohen: And then and then we'll see maybe we can um I can ask Hagit um to have a

iNua Technologies: he

Galit Cohen: meeting with you. Um she was there as well in um

iNua Technologies: Is it

00:27:21

Galit Cohen: so there's a big big smiles over there. Uh does do they work with you in other in other projects?

DICA Consulting: the the we are we're at the beginning they have a big project in

Galit Cohen: Yeah.

DICA Consulting: Ethiopia and we're just at the beginning of like uh

Galit Cohen: 12.

DICA Consulting: introduction and like hellos and see how we can we can work together. Uh but we still not uh not fully in

iNua Technologies: We're talking about from the JDC,

DICA Consulting: but

iNua Technologies: the Ethiopia project in the JDC.

Galit Cohen: Yeah. Yeah.

iNua Technologies: Ah, yeah. Okay. Yes.

Galit Cohen: Yeah.

iNua Technologies: Yeah. Yeah.

DICA Consulting: yeah uh so so we are in communication they know they know of us. This is something that uh came out uh a little bit before uh before the conference where we met. So it's still very very early

Galit Cohen: Okay. So,

DICA Consulting: on.

Galit Cohen: if you don't mind sending me an email with the costs and then maybe we can arrange a meeting with Khagit and maybe with Echel, the um aronomist of JDC.

00:28:27

iNua Technologies: Yeah,

DICA Consulting: Yeah.

iNua Technologies: we know

Galit Cohen: Um yeah,

iNua Technologies: there

Galit Cohen: and then we'll see if um if it's something that we can implement

DICA Consulting: Yeah. So just just Let's

iNua Technologies: okay I just want to clarify the use case the that you want because the

Galit Cohen: here.

DICA Consulting: see.

iNua Technologies: our costings also relies on it how much part with the JDC it's the bees or the crops or both just the be.

Galit Cohen: Just the bees at the moment. Yeah.

iNua Technologies: So we are talking about around 160 women.

Galit Cohen: Yes,

iNua Technologies: Um okay and we are looking

DICA Consulting: But also let's

Galit Cohen: it's 155 women and seven mentors.

DICA Consulting: add

iNua Technologies: for seven mentors.

Galit Cohen: So, it's 162

iNua Technologies: Okay, great. And we are looking at the channels of WhatsApp and SMSs,

Galit Cohen: people.

DICA Consulting: Yes.

iNua Technologies: right? How offline are the are how issues smartphones are mostly available? WhatsApp is mostly available.

Galit Cohen: Yes. But but uh reception is not always available.

00:29:20

iNua Technologies: Okay. So also SMS supports.

Galit Cohen: Data and data is not always available because uh you need to buy data.

iNua Technologies: So yeah.

Galit Cohen: Yeah.

DICA Consulting: Yeah.

iNua Technologies: So WhatsApp and SMS support.

DICA Consulting: Yeah.

iNua Technologies: Okay.

Galit Cohen: Yes.

DICA Consulting: And just a a question also. Um I I think when we when we give the estimated price also we will break down because you said that you're going to grow. Can you tell again say again to which number you're

Galit Cohen: So we we are now 135 and we will be 155.

DICA Consulting: you're okay.

Galit Cohen: Um and then it will keep on growing hopefully. It depends. Um yeah but it seems like we are growing.

iNua Technologies: Yeah.

Galit Cohen: Um just another thing that um two two tools that we are using it one that we've been using for a long time. It's Coobo collect. Uh we've been using Cobbo collect for a long time.

iNua Technologies: Mhm.

Galit Cohen: um a tool that's been very useful with us.

00:30:05

iNua Technologies: How is it for you? It's Was it okay?

Galit Cohen: Very useful. Yeah.

iNua Technologies: Great. And which other kind of digital tools do you use in order

Galit Cohen: Um and now like in in the at the conference they spoke about

iNua Technologies: to

Galit Cohen: farmers chat uh which I tested and uh it works like magic. It's AI um farmer

iNua Technologies: farmer check?

Galit Cohen: chat.

iNua Technologies: Okay.

Galit Cohen: Yeah. In one word.

iNua Technologies: Um yeah, I see.

Galit Cohen: Um and it's uh we tested some of the questions and it works

DICA Consulting: Mhm.

iNua Technologies: Okay.

Galit Cohen: amazingly. Um yeah and it gives a lot of information to the farmers.

iNua Technologies: Oh,

DICA Consulting: Good to know.

Galit Cohen: I haven't checked anything about beekeeping but uh in terms of farming crop farming it works well.

iNua Technologies: that's interesting because uh Okay,

Galit Cohen: Yeah.

iNua Technologies: great. Okay.

Galit Cohen: Okay.

iNua Technologies: And cover collect

Galit Cohen: Yeah.

DICA Consulting: Mhm.

Galit Cohen: We love Coobo Collect because in Coobo Collect you you do the surveys, everything is offline.

00:31:06

Galit Cohen: You don't need to be connected and then when you're connected everything is sent.

DICA Consulting: Mhm.

Galit Cohen: So but all the data is connect collected

iNua Technologies: Mhm. Okay,

Galit Cohen: offline.

iNua Technologies: great. And then everything is aggregated to a dashboard in corable collect I guess.

DICA Consulting: Mhm.

Galit Cohen: Yes. Yes.

iNua Technologies: I guess

Galit Cohen: It's not it's not dash dashboard but yes you can call it a dashboard and you can convert it to Excel so it's also

iNua Technologies: Okay. So,

Galit Cohen: easy.

iNua Technologies: most of all the data or all of your data is aggregated into Excel.

DICA Consulting: Mhm.

Galit Cohen: Yeah.

DICA Consulting: Mhm.

iNua Technologies: Great.

Galit Cohen: Okay.

DICA Consulting: Okay.

Galit Cohen: Excellent.

iNua Technologies: Perfect.

DICA Consulting: Um,

iNua Technologies: Thank you very

Galit Cohen: Okay.

DICA Consulting: let me just uh let me just see that we cover all bases so we can really prepare

iNua Technologies: much.

DICA Consulting: you uh proposition. Just a second. Are you working with with other third parties in the in the beekeeper operation or is just is just you giving the information the mentors and are the mentors your employees.

00:32:17

Galit Cohen: No, no. um we pay them a stipend a month.

iNua Technologies: Thank you.

Galit Cohen: Um but yeah, they're not employees.

DICA Consulting: Mhm.

Galit Cohen: They they kind of like freelancers if we can say or contractors.

iNua Technologies: And everything that the women manufacture from the honey,

DICA Consulting: Okay.

Galit Cohen: Um

iNua Technologies: they sell by themselves or do they you also help them sell what they

Galit Cohen: they have two options.

iNua Technologies: manufacture?

Galit Cohen: either they sell it on the on on their own to their community to their rural community and we have some places that choose to do that. Now for example we manufacture candle candles uh um cronella candles against mosquitoes and um and they sell it on their own to their

DICA Consulting: Mhm.

Galit Cohen: community. Um and then the alternative and they can do the same with honey.

iNua Technologies: Okay, this

Galit Cohen: Um the alternative is to sell the honey to the mentor and the mentor has

iNua Technologies: is

Galit Cohen: their own brand and their own marketing system to sell their honey. So they have their own extraction of honey and they sell

00:33:18

iNua Technologies: Okay.

Galit Cohen: it

iNua Technologies: And the mentors sell it independently, not related to you. Like you do not manage the men.

Galit Cohen: independently. No. And we are we're just helping them with a branding with you know like all their websites and social

iNua Technologies: Okay.

Galit Cohen: media and we just help them set up everything. After that they're on their own.

DICA Consulting: Do you get uh do you get the cut from it? Okay. Um Okay.

Galit Cohen: No.

DICA Consulting: Just another question. I'm sorry. I'm I'm just uh looking at my list uh to see that I covered everything. Um when you say about the monthly visit that they're doing beside the evaluation of the different uh cages like are you doing this like I'm trying to understand that monthly visit. So the mentor is coming to to the beehives like he's selecting individual uh you know like samples or is it like what's happening in that monthly

Galit Cohen: So they go to one of the apies.

DICA Consulting: visit.

Galit Cohen: I don't know how to say apies in Hebrew actually.

00:34:30

Galit Cohen: Um April is like a group of of hives. Um and um you can have an ap with 10 hives,

iNua Technologies: Mhm.

Galit Cohen: you can have an ap with 20 hives. And then they start or two hives. And they just start opening hives. They just wear the suits, the PPE, white suits, and they have the tools and they have the smoker and they start opening and examining the hives. Um,

iNua Technologies: Okay.

Galit Cohen: and then they go to another apri and until they cover all the hives that they have.

iNua Technologies: Okay. So, it's just a general

Galit Cohen: This is also

DICA Consulting: And this is where they Yeah. And this is where they also fill up the cobalt collect,

Galit Cohen: Yeah.

iNua Technologies: checkup.

DICA Consulting: I'm assuming.

Galit Cohen: Yes. Depends. Sometimes the cobalt collect is not every month. It's only when we issue surveys, but they do have a record that they keep of what happens. Every time they open a hive, they're supposed to write it down.

00:35:21

DICA Consulting: Mhm.

Galit Cohen: So, just so you understand in terms of logistics of that, um,

iNua Technologies: Okay.

Galit Cohen: they have very thick,

DICA Consulting: Mhm.

Galit Cohen: unfriendly gloves. They're very friendly against bees, not friendly to hold a pen or to touch a screen. Um,

iNua Technologies: Okay.

Galit Cohen: so, and they can't take it off.

iNua Technologies: Okay.

Galit Cohen: So uh so just so you know logistically there's a a challenge.

DICA Consulting: Yeah.

Galit Cohen: Um so

iNua Technologies: So only after they go off the suit,

Galit Cohen: yeah

iNua Technologies: they write down everything that happened in the meet in their

DICA Consulting: Okay.

Galit Cohen: they can just remove the when they move away from the honey from the from the from the hives they

iNua Technologies: visit.

Galit Cohen: can remove the glove and write while they're with the rest of the suit to put on and off the suit. It's a bit crazy.

iNua Technologies: Yes. And do they do that?

Galit Cohen: It's a

iNua Technologies: And do they write it? And do you have access to the sysmo information?

00:36:08

DICA Consulting: Yeah.

Galit Cohen: We don't ask for this information. It's really really up to them.

iNua Technologies: You don't it's not important for you.

Galit Cohen: We need to know how much have you harvested.

iNua Technologies: Okay.

DICA Consulting: Mhm.

Galit Cohen: Um.

iNua Technologies: Okay.

DICA Consulting: Mhm.

Galit Cohen: Yeah. Yeah.

DICA Consulting: Okay. Yeah.

Galit Cohen: But it's good to know like for example we have like a to understand for example why we lose

DICA Consulting: Because

iNua Technologies: Okay.

Galit Cohen: hives because sometimes the the bees will leave because there's um there's a disease or there's not enough food or we have um it's called wax moth. It's something that really really likes wax and when they eat the wax the bees either die or leave.

DICA Consulting: Mhm.

Galit Cohen: Um,

iNua Technologies: Which kind of Other challenges do you meet in the manufacturing in the

Galit Cohen: so

DICA Consulting: Mhm.

Galit Cohen: I think that diseases and and and um um predators.

iNua Technologies: honey?

Galit Cohen: What did you And absconding. Yeah. Absconding is when they leave.

00:37:03

Galit Cohen: Yeah. You have to have the right environment. If there's not enough food or something's not right, they'll leave to find another place. They're very particular. They're very good. They're magical.

iNua Technologies: Great.

DICA Consulting: This is why you also went into the agricultural side to make sure that they have enough enough

Galit Cohen: enough.

DICA Consulting: food.

Galit Cohen: Yeah,

DICA Consulting: Yeah, I

Galit Cohen: it's also not only that,

iNua Technologies: Okay.

Galit Cohen: it's also it takes a long time and it takes a lot of patience to to get honey.

DICA Consulting: understand.

Galit Cohen: Um it's not an easy field.

iNua Technologies: Is

Galit Cohen: So for for for the beekeepers,

iNua Technologies: this

Galit Cohen: it's a it's easy money to grow pumpkins and butternut. um 3 months they have money and but with the honey it will take

DICA Consulting: Mhm. I understand.

Galit Cohen: years

DICA Consulting: I understand.

iNua Technologies: It works more like you can sell it with higher cost like you can earn more of it I

DICA Consulting: So

00:37:56

iNua Technologies: guess.

Galit Cohen: honey you mean honey yes but it's very seasonal so you can harvest depends but you

iNua Technologies: Yeah.

DICA Consulting: Amen.

Galit Cohen: can harvest once twice three times a year uh when the hives are strong um at the moment And um some of them are very strong and and

DICA Consulting: Mhm.

Galit Cohen: can make so much honey. Right now it's winter here so we don't touch the hives at the moment.

iNua Technologies: What is

DICA Consulting: Mhm.

Galit Cohen: Um because all the all the honey is for them for the for the bees.

iNua Technologies: this?

Galit Cohen: Um just in terms of like I don't know if you're vegan or vegetarian or whatever but let me explain to you something. In a hive you have brood which is like the main box.

iNua Technologies: Is

Galit Cohen: And this brood it has 10 10 frames. And this is theirs.

iNua Technologies: it?

Galit Cohen: This is for the bees. We don't touch that. When they finish filling up that with honey, we take another layer. It's called a super.

00:38:50

Galit Cohen: And you can have two supers, three supers on top of a brood. And we harvest only for

DICA Consulting: Okay.

Galit Cohen: that.

iNua Technologies: Okay,

DICA Consulting: Okay. Good to know. Good to know.

iNua Technologies: this is

DICA Consulting: Um Okay.

Galit Cohen: So they have enough food for the babies and for themselves.

DICA Consulting: Okay.

Galit Cohen: We don't touch that.

DICA Consulting: That's amazing. That's also sustaining the bees themselves.

iNua Technologies: Yeah.

DICA Consulting: So like Yeah.

Galit Cohen: But it also like uh is just animal purity.

DICA Consulting: Um that's also true.

Galit Cohen: I think

DICA Consulting: Um I want to understand uh uh for if you can share more details

Galit Cohen: it

DICA Consulting: about the relationship between you and and the mentors. So from what I understood they're not only training these womens,

Galit Cohen: their

DICA Consulting: they also sell their products and they sell their honeys. And are those uh individual members or they're small businesses of their own?

Galit Cohen: their own businesses of their own or their own. Yeah, they start some of them started just because of us,

00:39:49

DICA Consulting: Yeah.

Galit Cohen: you know,

iNua Technologies: Thank

Galit Cohen: like they have never been into honey before in beekeeping. So,

iNua Technologies: you.

Galit Cohen: we just made them interested in it. Um and now they are they have their own businesses. Others had like this dream. They were already like one of them had already a dream of training women and uh she even

iNua Technologies: Mhm.

Galit Cohen: created you know like tried to create her own um uh her own reality and she called her on a website she's called academy because she wanted to become an academy so she is now an

iNua Technologies: This

DICA Consulting: Mhm.

iNua Technologies: is

Galit Cohen: academy.

DICA Consulting: Mhm.

Galit Cohen: Um so and some of them were all the time into beekeeping. So, and we just enhanced it and professionalized

iNua Technologies: okay. So,

Galit Cohen: it.

iNua Technologies: which kind of trainings does the trainer gets?

Galit Cohen: The I'm more into business.

iNua Technologies: Would

Galit Cohen: So, it's more marketing and and um yeah,

DICA Consulting: So they have the

00:40:46

iNua Technologies: it be?

DICA Consulting: professional.

Galit Cohen: sorry,

iNua Technologies: Yeah,

Galit Cohen: we were talking on

iNua Technologies: I think you

DICA Consulting: So that they have so you said that uh most of them have the B training

iNua Technologies: go.

DICA Consulting: information on their own but if they don't have the new supply for

Galit Cohen: Yes.

iNua Technologies: Okay. Okay.

DICA Consulting: them

iNua Technologies: And uh would it be beneficial also for the trainers themselves to have a tool that's

Galit Cohen: Yes.

iNua Technologies: like a chatbot for their clients.

Galit Cohen: Possibly. Um but I think that it's good that today they will have also questions answers um kind

iNua Technologies: Okay.

Galit Cohen: of a chat you know because not all of them are on the same

DICA Consulting: Mhm.

Galit Cohen: level and it's good that it will standardize the

iNua Technologies: Mhm. Okay.

DICA Consulting: Mhm.

iNua Technologies: So we can also provide for the trainers like a general chatbot for all the

Galit Cohen: level.

iNua Technologies: trainers to send their customers to ask questions and get answer regarding the honey.

00:41:44

Galit Cohen: Yes.

iNua Technologies: This is also okay great another direction.

DICA Consulting: Uh,

iNua Technologies: Okay.

DICA Consulting: another thing that came into mind is because they

Galit Cohen: Good.

DICA Consulting: themselves are small businesses and so like they have an ongoing communication with the beekeepers as well. This is another point of contact because I'm sure that they would they themselves would want to employ more beekeepers. So instead of just one on 20 women, they can be one on 50 40. Uh so this is another

iNua Technologies: Mhm.

Galit Cohen: It's not really It's not You can't just grow like that because

DICA Consulting: connection

Galit Cohen: um you need more land. You need more um food for the bees. It's not like you can't just grow the same way a farmer grows. Um,

DICA Consulting: with her.

Galit Cohen: you need you need land, you need water, you need um and you need enough forage, enough food for them.

iNua Technologies: Where is

Galit Cohen: So, it's not like they can't have endless or even 50.

iNua Technologies: it?

Galit Cohen: It's too much because you need more hives to place hives.

00:42:58

Galit Cohen: It's not uh it's not just like to train somebody. You need to make sure that they get a a beuit.

iNua Technologies: Nothing.

Galit Cohen: A beuit is very expensive. A beehive is very expensive. This is the expansion that JDC is not the JDC's kind of expansion. We don't support that kind. What we want is again small cohorts because a small cohort we can actually have enough

DICA Consulting: Mhm.

Galit Cohen: hives for them and if we have enough land we can actually still support the bees.

iNua Technologies: Is

Galit Cohen: Otherwise they will die or obscond.

DICA Consulting: Okay. I I understand. So good, good that you said this. Um, okay. I'm I'm trying to understand. Um, so it it sounds like a whole ecosystem in the end. And so this how do you onboard new

Galit Cohen: Yes.

DICA Consulting: women in this scenario? So like the the mentors from what I understood now cannot just simply go and train more women. They it needs to be filtered by you in some

00:44:04

Galit Cohen: Yeah.

DICA Consulting: way.

Galit Cohen: It doesn't really I mean but they wanted to work through us because we can help them like now for example one of our mentors added three people now these people need food when they come for training they

DICA Consulting: Mhm.

Galit Cohen: need transport when they come to training they might need extra beuits um they don't have this money so that's something that they would like us to support them with um but um yeah it's just the way

DICA Consulting: Okay.

Galit Cohen: we on board Until now it's basically we identified the mentor and the mentor um identified the women in the area that there are women who already are interested or

DICA Consulting: What is it?

iNua Technologies: Mhm.

Galit Cohen: can benefit from it. And um now the new way that we are on boarding the new 20 for example are farmers that already are farmers and they already work with local women and we're just putting on top of that the honey. So it's easier on boarding.

iNua Technologies: Mhm.

Galit Cohen: Till now it was kind of like a starting from scratch and we don't want to start from scratch now.

00:45:07

DICA Consulting: Mhm.

iNua Technologies: Yeah.

Galit Cohen: We want to just find the right partners and to go with it quickly.

DICA Consulting: All right.

iNua Technologies: Mhm.

DICA Consulting: It it makes sense because also if they have land for crops then it can

Galit Cohen: Yeah.

DICA Consulting: it can give more food to the beehives and you have like a like a benefit from from all sides. I get I get it. Um just one more question.

Galit Cohen: Yeah.

DICA Consulting: Is your is this project theoretically like timeless like this will go or this has a due date?

Galit Cohen: You know, it doesn't really have due date. It has a due date from our from our side, right? So JDC will not support it forever.

DICA Consulting: Mhm.

Galit Cohen: Um it is the JDC's initiative. We are just implementing for them.

DICA Consulting: Mhm.

Galit Cohen: They will not support it forever.

iNua Technologies: Mhm.

DICA Consulting: Mhm.

Galit Cohen: Um so we kind of like trying to step back a little bit. Um giving more business skills uh because right now until now all the mentors saw it as a project and we tried to change their mindset to a business.

00:46:16

Galit Cohen: Um so we give we're going to start with more business skills um individually.

DICA Consulting: Mhm.

Galit Cohen: So it's not like oh you can go to an MBA and become a genius.

iNua Technologies: This

Galit Cohen: Uh no so so we're trying to actually give them um a mentorship for

iNua Technologies: is

DICA Consulting: That's

Galit Cohen: their business. Uh so

iNua Technologies: What is the vision for when you

Galit Cohen: that they will actually be on a on a a high production level of honey

DICA Consulting: what is the Mhm.

iNua Technologies: leave?

Galit Cohen: that um the the all the hives will be occupied with bees and they will be strong hives that will produce enough honey that it will be a strong business.

iNua Technologies: And the connection the the strong connection has been the trainers and the women will stay

Galit Cohen: Yes.

iNua Technologies: keep live by itself.

Galit Cohen: Yes. Yes,

iNua Technologies: And what is the currently the project budget?

DICA Consulting: Mhm.

Galit Cohen: it changes every year.

iNua Technologies: It changes a bit.

Galit Cohen: I don't know if I can if I can disclose it between

00:47:11

iNua Technologies: Okay. Okay. Okay. Yeah. Yeah.

DICA Consulting: Yeah. No. Uh my question is how long does the project uh running for and

Galit Cohen: Yeah,

iNua Technologies: Okay.

DICA Consulting: like what is this this theoretical end date that you that you said that the JDC has?

Galit Cohen: um so we are entering year three of the project.

DICA Consulting: Mhm.

Galit Cohen: Um and um and before that with us before that it was one year without us it was with another implementing agent and agent and it didn't work well and then they asked people for change to take over um and um yeah so this is basically how we started and end it I don't know it it depends depends on funding depends you know um when it's such a long-term project uh the

iNua Technologies: Mhm.

Galit Cohen: donors lose a little bit of interest because donors want to see how

DICA Consulting: Mhm.

iNua Technologies: Mhm.

Galit Cohen: they the success quite quickly and this project is not because of us just

DICA Consulting: Mhm.

iNua Technologies: Is it?

Galit Cohen: because the bees cannot be tamed.

00:48:15

DICA Consulting: Yeah.

iNua Technologies: Yes.

DICA Consulting: The reality of nature, you know,

Galit Cohen: Yeah.

DICA Consulting: like this is I get it.

Galit Cohen: Yeah.

DICA Consulting: Uh, okay. So,

iNua Technologies: Yeah.

Galit Cohen: Not like the be this could be

DICA Consulting: does this mean does this mean that every year they're they're creating donations for the next

Galit Cohen: Yeah,

DICA Consulting: year?

Galit Cohen: I think that this time they actually got it for a few years. Um, now they received some funding.

DICA Consulting: Mhm.

iNua Technologies: Okay.

Galit Cohen: Um, but I don't know the details.

DICA Consulting: Mhm.

Galit Cohen: I just know what I ask for and then they approve it or disapprove it or reduce it or whatever. And then that's what I what is on their

iNua Technologies: Okay.

Galit Cohen: side.

DICA Consulting: Yeah,

iNua Technologies: Yeah.

DICA Consulting: but you you were working in a in an unknown situation where you're like, okay, so I have this project and theoretically it's like at the end of 2026, do you know what's happening in 2027? Like, are you able to to look that

Galit Cohen: It's year on year. It's year. Yeah.

DICA Consulting: far?

Galit Cohen: It's But it's a normal life in an NGO like this is not every year.

DICA Consulting: Yeah.

Galit Cohen: Yeah.

DICA Consulting: Yeah, I get it. I get it. But it just gets the work to be more stressful and

Galit Cohen: Welcome to our

DICA Consulting: complicated.

Galit Cohen: life.

DICA Consulting: Um,

iNua Technologies: Okay,

DICA Consulting: okay.

iNua Technologies: I think we are done.

DICA Consulting: Okay.

iNua Technologies: Yes.

DICA Consulting: Yeah.

Galit Cohen: Okay,

iNua Technologies: Great.

DICA Consulting: Yeah.

Galit Cohen: thank you so much.

DICA Consulting: Thank you so much for Yeah.

iNua Technologies: Thank you for answering.

Galit Cohen: Lovely to meet you ladies.

iNua Technologies: You

DICA Consulting: It's so much. Yeah.

iNua Technologies: too.

Galit Cohen: Bye.

DICA Consulting: And we will be in touch and send you and send you everything.

Galit Cohen: Excellent.

iNua Technologies: I propose that.

DICA Consulting: Yeah,

iNua Technologies: Yes.

Galit Cohen: Thank you.

DICA Consulting: sure. Bye. Bye.

Tab 3

- we need to communicate with our beekeepers. We need to communicate with our mentors. At the moment, we have 135 beekeepers. So this is basically a woman empowerment project when we teach beekeeping women from rural communities how to beekeep as a business.
- they sell honey and they sell wax products and they sell a whole lot of products - it's not yet on mass production
- connection between Israeli technology and the JDC will actually like
- one of the growing part of this project is also um agriculture so we're bringing now crop production uh So it will be it's for the bees. So it gives more food for the bees and it's also for the women to diversify their income.
- the idea that we might have a constant communication with our beneficiaries that is easy easy to use um something that sounds attractive.
- **Galit Cohen:** I'm the founding director.
- your motivation: **Galit Cohen:** Tikun from Tikunam Jewish but supporting townships in in South Africa and um and um and I just realized that the real answer is to support rural communities to stop the migration to the townships because the townships are overcrowded. they basically urban poor. So that's basically it. and uh and by offering more opportunities for people living in rural communities, we can actually change a lot of things in South Africa.
-
- The beekeeping is in six provinces
- by offering more opportunities for people living in rural communities, we can actually change a lot of things in South Africa.

Operation

- We have seven mentors based in all the different provinces, and each of them have um 10 to 20 women that they manage underneath them.
- we use WhatsApp a lot. I don't know if you know about WhatsApp and so all of them have these groups where all the women are on the groups and they generally communicate through WhatsApp.
- WhatsApp is mostly available. But but reception is not always available. And data is not always available
- we communicate also with all of our mentors. We have our own group through WhatsApp. So the the messages travel down like that.
- part of our M and um we're trying to get more um details fromm , we have somebody who's doing online or phone conversations with them trying to get all the information from them (firstly when we did our very first survey):
 - baseline assessment stuff in terms of where do they come from?
 - what is their household like to get a little bit of the um demographics of you
 - where they come from and their income

- how often do you harvest?
- How much money do you make
- are you on a government grant
- where does your money actually come from
- where do you spend the money
- do you spend it on food for your household or education for your children
- how long they've with us.
- why do they stay?
- what are their needs?
- Where do they I mean the last seminar we had, we actually um built a little pack that each mentor can take a beekeeper through journey in in terms of their progress and success.
- What where do they want to end up in life and how can we help them get there?
-
- so in terms of getting a big impact um we like to see line of sight on all angles of the project
- 135 and and it's going to grow. So we'll have about 155 in the next few
- we communicate in English

Trainings

- When they start out, they have about every week or second week they go undergo training
- he beginning when a woman gets like on boarding to the program, she's assigned to a mentor. Each mentor has about you said 20 women that he's that
- And then he's like at the beginning is like getting to know her, visiting quite often once a week for training first three
- the initial training and then after and yeah so the training is about months and then afterwards it's once a month.
- after they know more or less what they're doing they'll come once a month
- Once a month: monitoring. So, um, every beehive has to be opened once a month to check that there's no diseases, that there is everything that's supposed to be there, that it's doing well, and they're supposed to have a log sheet to say this is what it looks like, the brood is like this, or, you know, I'm not going to go into too much detail to explain the hive, but they have to have high
- the ladies come to wherever the hives are and they must do it, It's their job, not the mentor

- We don't often talk to them, (to the ladies) - so we already spoke to them twice - we have somebody who's doing online or phone conversations with them trying to get all the information from them.

Mentors

- we pay them a stipend a month.
- they kind of like freelancers if we can say or contractors.
- The honey- either they sell it on the on their own to their community, to their rural community, and we have some places that choose to do that. Now for example we manufacture candle candles uh um cronella candles against mosquitoes and um and they sell it on their own to their community
- The alternative is to sell the honey to the mentor and the mentor has their own brand and their own marketing system to sell their honey. So they have their own extraction of honey and they sell
- we're just helping them with a branding with you know like all their websites and social
- And then they start or two hives. And they just start opening hives. They just wear the suits, the PPE, white suits, and they have the tools and they have the smoker and they start opening and examining the hives. and then they go to another apiary and until they cover all the hives that they have. And this is where they also fill up the cobalt collect, Sometimes the cobalt collect is not every month. It's only when we issue surveys, but they do have a record that they keep of what happens. Every time they open a hive, they're supposed to write it down.
- If it's not a survey and just a normal visit - We don't ask for this information. It's really really up to them. - We need to know how much have you harvested.
- the relationship between you and the mentors. - So from what I understood they're not only training these women, they also sell their products and they sell their honeys. And are those uh individual members or they're small businesses of their own? their own businesses of their own or their own. Yeah, they start some of them started just because of us,
-
- their own businesses of their own or their own. Yeah, they start some of them started just because of us,
- they have never been into honey before in beekeeping.
- I think that it's good that today they will have also questions answers um kind
- of a chat you know because not all of them are on the same level, and it's good that it will standardize the So we can also provide for the trainers like a general chatbot for all the
- which kind of trainings does the trainer get? **Galit Cohen:** The I'm more into business. So, it's more marketing and and um yeah,

- basically we identified the mentor and the mentor um identified the women in the area that there are women who already are interested

-

Challenges

- diseases and predators.
- They don't know why bees leave sometimes (If there's not enough food or something's not right, they'll leave to find another place.)
- It takes a long time to get from starting point to where they have honey
-

Vision

- They will actually be on a on a a high production level of honey
- all the hives will be occupied with bees and they will be strong hives that will produce enough honey that it will be a strong business.
- Where they what to go - now the new way that we are on boarding the new 20 for example are farmers that already are farmers and they already work with local women and we're just putting on top of that the honey. So it's easier on boarding.
- we're going to start with more business skills um individually.

Proposition:

- **M&E Agent**
 - **1 questionnaire a month**
 - **6 questions**
 - **3 broadcast**
 - **Example Take from the questions she asked and create a conversation**
- **Bee keeper Expert**
 - **Q&A- 4 interaction a month**
 - **2 broadcasts informational\educational**
 - **Example Start with broadcast that create a conversation**
- **Pests and Disease Diagnosis agent**
 - **Q&A - depends on the pest protocol - approx 7 interactions (heavy tokens count - 10k per interaction)**
 - **2 broadcast informational\educational**
 - **Example - q&A on month honey**
- **Customer service agent for the mentor's clients**
 - **Q&A - 10 integration a month per area**
 - **3 integration per conversion**

- **Example A customer is interested in ah honey and the agent ask them where they are from and give's the right mentor's number**

Beside each agent to the an example of a conversion
